## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 13-24 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 13 recites "an oil separator for the separation of oil from the crankcase ventilation gas of a combustion engine, comprising : a housing with a separation element arranged therein , an inlet for gas to be cleaned, an outlet for cleaned gas, and an outlet for separated oil, an uncleaned-gas region provided in said housing adjacent to the inlet, and containing an oil sink arranged to receive coarse-particle oil that is carried along with an inflowing gas flow, a coarse-particle-oil cyclone provided in said housing and having an inflow opening positioned in the oil sink at the same vertical level as the oil sink, and the separation element comprising an inflow opening that is spatially positioned at a vertical level above the inflow opening of the coarse-particle-oil cyclone".

Takeyama et al(5239972) and Busen et al(6626163) and Wagner(5450835) teach an oil separator for the separation of oil from the crankcase ventilation gas of a combustion engine, comprising : a housing with a separation element arranged therein , an inlet for gas to be cleaned, an outlet for cleaned gas, and an outlet for separated oil, an uncleaned-gas region provided in said housing adjacent to the inlet, and containing an oil sink arranged to receive coarse-particle oil that is carried along with an inflowing gas flow, but the references are silent as to a coarse-particle-oil cyclone provided in said housing and having an inflow opening positioned in the oil sink at the same vertical level as the oil sink, and the separation element comprising an inflow opening that is

Art Unit: 1797

spatially positioned at a vertical level above the inflow opening of the coarse-particle-oil cyclone. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide a coarse-particle-oil cyclone provided in said housing and having an inflow opening positioned in the oil sink at the same vertical level as the oil sink, and the separation element comprising an inflow opening that is spatially positioned at a vertical level above the inflow opening of the coarse-particle-oil cyclone because none of the references cited suggest such a modification. Claims 14-24 depend on claim 13 and hence are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
